EPICARE: Health and Safety Management

Eduardo Ferreira de Souza [1]
João Pedro Braga Gomes [2]
Luana Teixeira Moraes [3]
Rita de Cássia da Costa Silva [4]

Safety, health, and well-being of employees are fundamental aspects for any company that values its workforce. Furthermore, in many countries, effective management of Personal Protective Equipment (PPE), medical examinations, and safety-related training are legal requirements. In this context, an integrated management software for medical examinations, training, and PPE becomes an indispensable tool for companies aiming to maintain a safe, healthy, and efficient work environment while optimizing their financial resources.An integrated medical examination management software is an essential tool for companies that value the safety, health, and well-being of their employees. It allows for the scheduling and monitoring of medical examinations required for new employees and periodic examinations to ensure that workers are fit for their roles. Moreover, the software sends automatic reminders to employees and managers about the expiration date of examinations, reducing the risk of forgetfulness and compliance issues. The software also enables the creation of detailed examination records, including results and medical history, making it easier to access past information.Preventing workplace accidents and occupational diseases results in cost savings related to medical leaves and compensation. The software helps identify areas of risk and implement preventive measures, reducing the occurrence of these problems. Additionally, inventory control of Personal Protective Equipment (PPE) and training management allow for efficient allocation of resources, reducing waste. Non-compliance with safety and health regulations in the workplace can lead to costly fines and penalties, but an integrated management software helps ensure compliance with all laws and regulations, avoiding legal issues.In summary, investing in an integrated medical examination management software brings benefits such as employee protection, compliance with legal obligations, and optimization of financial resources, promoting a more efficient and productive work environment.

Keywords: Protective; Health; Work; Management.
