Monkey Prod is an innovative platform designed for developers, offering a seamless integration with GitHub repositories to enhance productivity tracking and collaboration metrics. Developed as part of a comprehensive project, Monkey Prod provides a user-friendly interface where developers can effortlessly sign up and link their GitHub repositories. The platform's core functionality revolves around insightful commit analytics, offering a robust dashboard that visually represents GitHub statistics. The primary objective is to streamline the visualization of existing GitHub metrics, presenting users with a straightforward dashboard that includes counts, averages, and graphs. Monkey Prod not only empowers individual developers to monitor their progress effectively but also facilitates team collaboration by providing a centralized hub for tracking and analyzing contributions. This project contributes to the realm of software engineering by offering a practical solution for developers seeking a comprehensive overview of their GitHub repositories, ultimately fostering a more data-driven and efficient development process.

Keywords: Productivity Management; Developer Engagement; GitHub; Commit Metrics.
